<p>THE most useful and necessary tables of Arithmetic, collected from the best authors 1—8</p> <p>A table shewing the price of the great hundred, or 112 lb. at any price, from one farthing to 18d. the lb. and the contrary 9</p> <p>A table of wages or expenses, by the day, week, month and year 10</p> <p>A table, shewing the exact number of days from any day proposed in one month, to the same day in any other 11</p> <p>Transfer days, and payment of dividends, at the South-sea house, bank of England, and East-India house 12, 13</p> <p>Tables of interest, from one day to half a year 14—18</p> <p>A table of the principal direct roads in England and Wales, and other roads which branch out from them, according to the measured dist. 19—22</p> <p>A table of the sun's rising every third day in the year 23</p> <p>A table, shewing by the dominical letter, the day of the week correspondent to the day of the month in any year 24</p> <p>A table, shewing the dominical letter for forty years, viz. from 1761 to 1800 24</p> <p>A table, shewing what day of the week begins any month for ever 25</p> <p>A plain and easy table, shewing the time of high-water at different ports 25</p> <p>A table for the valuation of an annuity on a single life, at 3, 4, and 5 per cent. calculated from the London bills of mortality 25</p> <p>A table shewing the time of</p>	<p>years and months, in which an annuitant will have his purchase money reimbursed, at several rates of interest 27</p> <p>The value and proportion the stocks and public funds bear to each other 28, 29</p> <p>Table of interest on India bonds, or any other bond or security of 100l. at 5 per cent. 30</p> <p>Commission or brokerage 31</p> <p>Course of exchange at Lond. 32</p> <p>Table of several foreign gold and silver coins, assayed in the mint, and rated as bullion 33</p> <p>Table shewing the value and weight of the principal European coins, as they pass in New-York, Philadelphia, &c. 34</p> <p>Table of English money equated in Irish 35</p> <p>Account of weights, measures and coins used in England 36—39</p> <p>Tradesmens method for marking their goods for sale 40</p> <p>A table, shewing the price of carriage of gravel to any distance not exceeding four miles from the pit 41</p> <p>The anglers assistant 42—45</p> <p>Tables of the amount of any commodity from 1s. to 10s. 46—53</p> <p>Maxims and rules relating to drawing bills 53, 54</p> <p>Table of fees to be taken by clerks to justices of peace 55, 56</p> <p>Foreign mails and postage 57</p> <p>Summary of the house of commons, and supplies granted yearly during the late war 58</p> <p>A concise and easy method of writing short-hand 59—62</p> <p>List of the palaces, principal places, universities, chief curiosities of England, and a traveller's notice 63—72</p>

kind ever offered to the public, there are
bound up with it leaves of the A4 size
whose use is already sufficiently explained.
From the expense in preparing the skin
and the cost of binding they cannot

P R E F A C E

THE usual MEMORANDUM-BOOKS,
which are published yearly, as they
are only calculated for a time, stand in
need of perpetual alterations; and, by the
necessity of writing with ink on white pa-
per leaves, the occasional business of the day,
are often too narrow for comprehending
the memorandums of the year, whether
they respect business, appointments, or
pleasure. To remedy this defect, the pro-
prietor has, in a new manner, composed a
POCKET BOOK, consisting of all the most
useful tables of arithmetic, tables of interest,
and a variety of other necessary tables for
the use of all such whose business requires
accuracy and dispatch; and, to make this
the most useful and necessary book of the

P R E F A C E.

kind ever offered to the public, there are bound up with it leaves of the *ASSES SKIN*, whose use is already sufficiently explained.

From the expence in preparing the skin, and the difference of binding, they cannot be sold at so cheap a rate as other memorandum-books; but it is imagined, that will be sufficiently compensated by the superior use of this book, which will last a number of years, and serve the purposes of all others.

THE method of cleaning CUMMINGS's Patent Asses Skin, after wrote on with a pencil, or pen and ink, is to rub it with an handkerchief or sponge, dipt in a little warm water and soap, or with a few grains of common house sand, a little wetted, which in a moment rubs off either pencil or ink, without either scratching or hurting the skin.

The most Useful and Necessary

TABLES OF ARITHMETIC,

Collected from the best Authors.

T I M E.

60 Seconds	-	-	} make a {	Minute
60 Minutes	-	-		Hour
24 Hours	-	-		Day
7 Days	-	-		Week
4 Weeks	-	-		Month
13 Months, 1 Day, 6 Ho.	-	-		Gregorian Year
365 D. 5 Ho. 48 M. 57 S.	-	-		Tropical Year

This Table is useful in Chronology, and in astronomical Calculations.

WINE MEASURE.

28 and 7-8ths Cubic Inches	} make a {	Pint
2 Pints		Quart
4 Quarts		Gallon
42 Gallons		Tierce
1 and 1-half Tierce		Hogshead
1 and 1 3d Hogshead		Puncheon
1 and 1-half Puncheon		Butt or Pipe
2 Butts or Pipes		Ton

By this Measure all Wines, Brandies, Spirits, Mead, Cyder, Perry and Oil, are measured.

B

BEER

BEER MEASURE of LONDON only.

35 and 1-4th Cubic Inches	}	make a	Pint
2 Pints			Quart
4 Quarts			Gallon
9 Gallons			Firkin
2 Firkins			Kilderkin
2 Kilderkins			Barrel
2 and 1 half Barrel			Hogshead
2 Hogheads			Butt

All Beer and Ale, whether in Town or Country, are measured by Winchester Measure.

ALE MEASURE.

35 and 1-4th Cubic Inches	}	make a	Pint
2 Pints			Quart
4 Quarts			Gallon
8 Gallons			Firkin
2 Firkins			Kilderkin
2 Kilderkins			Barrel
1 and 1-half Barrel			Hogshead

This Distinction betwixt Beer and Ale Measure is now used only in London, and within the Bills of Mortality.

N. B. A Firkin of Soap, and Herrings, are the same with that of Ale.

BEER and ALE in the COUNTRY.

35 and 1-4th Cubic Inches	}	make a	Pint
2 Pints			Quart
4 Quarts			Gallon
8 and 1-half Gallons			Firkin
2 Firkins			Kilderkin
2 Kilderkins			Barrel
1 and 1-half Barrels			Hogshead

In all Parts of England (except London) Beer and Ale, whether Strong or Small, are measured according to this Table, by a Statute of Excise made in 1689.

DRY

DRY MEASURE.

33 and 3-5ths Cubic Inches	}	make a	{	Pint
8 Pints				Gallo
2 Gallons				Peck
4 Pecks				Busshel
8 Busshels				Quarter

5 Pecks a Busshel of Water-Measure

4 Busshels a Coom

10 Cooms a Wey

2 Weys a Last of Corn

36 Busshels a Chaldron of Coals

By this Measure, Corn, Salt, Coals, Lead, Ore, Oysters, Mussels, and other dry Goods are measured.

APOTHECARY'S WEIGHT.

20 Grains	}	make a	{	Scruple
3 Scruples				Drachm
8 Drachms				Ounce
12 Ounces				Pound

By this Weight Apothecaries compound their Medicines, but buy and sell their Drugs by Avoirdupoise Weight.

CLOTH MEASURE.

2 and 1-4th Inches	}	make a	{	Nail
4 Nails				Quarter
4 Quarters				Yard
5 Quarters				Ell, English
3 Quarters				Ell, Flemish
6 Quarters				Ell, French

All Scotch and Irish Linens are bought and sold by the Yard English, but all Dutch Linens are bought by the Ell Flemish, and sold by the Ell English.

LONG MEASURE.

3 Barley Corns	-	-	} make a	Inch
12 Inches	-	-		Foot
3 Feet	-	-		Yard
5 and 1-half Yards	-	-		Pole or Perch
40 Poles or Perches	-	-		Furlong
8 Furlongs	-	-	}	Mile
3 Miles	-	-		League

This Measure treats of Length only.

WOOL WEIGHT.

7 Pounds	-	-	} make a	Clove
2 Cloves	-	-		Stone
2 Stone	-	-		Todd
6 and 1-half Todds	-	-		Wey
2 Weys	-	-		Sack
12 Sacks	-	-	}	Laft

The Pound in this Weight is the same with the Pound Avoirdupoise.

SQUARE MEASURE.

144 Square Inches	-	-	} make a	Square Foot
9 Square Feet	-	-		Square Yard
30 and 1-4th Square Yards	-	-		Square Pole
40 Square Poles	-	-		Square Rood
4 Square Roods	-	-		Square Acre
640 Square Acres	-	-	}	Square Mile

This Measure contains Length and Breadth, and is used in measuring the Contents of Surfaces.

AVOIRDUPOISE WEIGHT.

16 Drachms	-	-	} make a	Ounce
16 Ounces	-	-		Pound
28 Pounds	-	-		Quarter
4 Quarters	-	-		Hundred Weight
20 Hundred Weight	-	-		Ton

By this Weight all Physical Drugs, Butter, Cheese, Flesh, Grocery Wares, and all Goods that have Waste, are weighed.

VALUE

VALUE and WEIGHT of the following COINS.

4 Farthings	} make a	{ Penny		{ 6 Shil. 8 Pence	}	is a	{ Noble			
12 Pence								{ Shilling	{ 13 Shil. 4 Pence	{ Mark
20 Shillings										

			l.	s.	d.	oz.	dw.	gr.

December	31	62	90	121	151	182	212	243	274	304	335	365

The Use of the preceding Table. Find the given Month in the first Column, and the Month to which the Number of Days is required at the Head of the Table, and in the common Angle of meeting is the Number of Days required.

Example. How many Days are there from November 1 to July 1? Find November in the first Column, and July at the Head of the Table, and in the common Angle of meeting is 242, the Number of Days required. But if the given Days are different, 'tis only adding or subtracting the Difference: For Instance, had the above Example been from November 1 to July 10, you must have added 10 Days to the Number you find in the Table; and, on the other Hand, had it been from the 10th of November to the 1st of July, you must have subtracted 10 Days from the Number you find in the Table, and so in every other Instance, when the Day of one Month is different from that of the other, add or subtract the difference, be it more or less, according to the Rule above mentioned.

Oct.	6,18	6,24	6,30	6,35	6,41	6,47	6,53	6,59	7,04	7,10
Nov.	7,18	7,24	7,29	7,34	7,39	7,45	7,47	7,51	7,56	8,00
Dec.	8,03	8,06	8,07	8,10	8,11	8,12	8,13	8,13	8,12	8,11

To find the sun's setting, subtract the rising from 12. For the length of the day, double the setting; for that of the night, double the rising.

A TABLE, shewing by the Dominical Letter, the Day of the Week correspondent to the Day of the Month in any Year.

Months.	Dominical Letters.							EXAMPLE.
	A	B	C	D	E	F	G	
January, Octo.	A	B	C	D	E	F	G	To find on what day of the week the 1st of March happens 1766, N. S. the dominical letter being E for that year.
Feb. Mar. Nov.	D	E	F	G	A	B	C	
April, July	G	A	B	C	D	E	F	To the right of the month March, find the dominical letter E, under which at the bottom is the Sunday column, wherein stands all the Sundays in that month, viz. 2, 9, 16, 23, 30; so that the first of March is on a Saturday. For the next columns to the right in order, shew all the Mondays, Tuesdays, Wednesdays, &c. by which the week day to any month-day of any year is discovered at sight sooner than by any other method whatsoever.
May	B	C	D	E	F	G	A	
June	E	F	G	A	B	C	D	
August	C	D	E	F	G	A	B	
Sept. Dec.	F	G	A	B	C	D	E	
Days of the month correspondent to the seven Week Day Columns in order of succession, from the Sunday Column.	1	2	3	4	5	6	7	
	8	9	10	11	12	13	14	Note, Sunday-column is under the dominical letter for the year; which letter is to be sought for to the right of the month.
	15	16	17	18	19	20	21	
	22	23	24	25	26	27	28	
	29	30	31					

A TABLE shewing the Dominical Letter for Forty Years, viz. from 1761 to 1800.

1761	D	1771	F	1781	G	1791	B

69	A	79	C	89	D	99	F
70	G	80	B A	90	C	1800	E

A TABLE shewing what Day of the Week begins any Month for ever.

Months.	A	B	C	D	E	F	G
Jan.	Sunday	Saturd.	Friday	Thurf.	Wedn.	Tuefd.	Mond.
Feb.	Wedn.	Tuefd.	Mond.	Sunday	Saturd.	Friday	Thurf.
March	Wedn.	Tuefd.	Mond.	Sunday	Saturd.	Friday	Thurf.
April	Saturd.	Friday	Thurf.	Wedn.	Tuefd.	Mond.	Sunday
May	Mond.	Sunday	Saturd.	Friday	Thurf.	Wedn.	Tuefd.
June	Thurf.	Wedn.	Tuefd.	Mond.	Sunday	Saturd.	Friday
July	Saturd.	Friday	Thurf.	Wedn.	Tuefd.	Mond.	Sunday
August	Tuefd.	Mond.	Sunday	Saturd.	Friday	Thurf.	Wedn.
Sept.	Friday	Thurf.	Wedn.	Tuefd.	Mond.	Sunday	Saturd.
Octob.	Sunday	Saturd.	Friday	Thurf.	Wedn.	Tuefd.	Mond.
Nov.	Wedn.	Tuefd.	Mond.	Sunday	Saturd.	Friday	Thurf.
Dec.	Friday	Thurf.	Wedn.	Tuefd.	Mond.	Sunday	Saturd.

This Table is very plain; for having the dominical letter for the given year, find that on the head, and guide your eye down from it till you come right against the month, and there is the name of the day of the week that begins that month.

A plain

A plain
Note, That the Moon's age being taken notice of
the time of High-water at

ny

Note, That the Moon's age being taken notice of in the Table, you have the time of High-water at all the under-named places.

Queenborough, Portsmouth, Southampt. Kentish-
Knock, Leath, Beachy, Isle of Wight, Dunkirk,
Candalo, Coast of Flanders, Spits, and Dover-
Peel.
Graveland, Downs, Blacknefs, Romney, Tlanet,
Scilly, Half-tide, North-Cape before Cocquit, and
between Calais and Dover.

London, Tinnmouth, Hartlepool, Amsterdam,
Whitby, Dort, Gascoin, West of Ireland, at Groin,
at Rotterdam, and in Robin-Hood's Bay.

Newcastle, Humber, Falmouth, Severn-mouth,
at the Spurn between Scilly and Lizard, Ramsey,
Dartmouth, Guernsey, Torbay, St. Malo's.

Plymouth, Antwerp, Hull, St. David's, Holms
of Bristol, Lunday, St. Paul's Salcom without U-
boat at Waterford and at Lynn half-tide.

Bristol-Key, Weymouth-Key, Alborough, Foulness Lins, the Start before St. Nicholas, Sedmouth in the Channel between Foy and Falmouth.

Yarmouth Road, Harwich, Calais Road, Dover,
Cowes, Caen, the Firth, South-Foreland, St. He-

Hague, Peter-port, Dublin, between Beachy and
Inle of Wight, Yarmouth, Sr. Magnus's Sound,
without the Collects in the Channels.

Example.] What's the value of an annuity of 20 l. a year for the life of a person of 45, worth in ready money, interest at 5 per cent. ?

Against 45 the age stands 9,95
Multiply by the annuity 20

Answer in ready money £. 199,00 viz. 199 l.

A TABLE shewing the time, in years and months, in which an annuitant will have his purchase-money re-imburfed at several rates of interest.

Explained.] The first numbers shew the number of years purchase the annuity is supposed to be bought at; and the following figures shew the years and days the annuity must be received, to reimburse the first cost.

EXAMPLE. A person gives $12\frac{1}{2}$ years purchase for an annuity for life, and would know how many years this ann. must be received, to reimburse the charge of buying, money yielding but 4 per cent. per ann. interest.

To resolve this question, you must look in the first row of figures for the $12\frac{1}{2}$ years purchase; then look for the number upon the line even with the said $12\frac{1}{2}$, it being the answer, viz. 17 years 246 days; and 17 years 246 days the buyer must receive the annuity to be reimbursed the charge of the cost.

THE opposite table exhibits, at one view, the intrinsic value per cent. of the public funds, and the proportion they bear to each other; by which any person may know which will be most advantageous to purchase, and what proportion such purchase bears to the value of landed estates and life annuities.

EXPLANATION of the TABLE.

In the news-papers of July 27, 1761, I find that 3 per cent. annuities are at $82\frac{1}{2}$, and India Stock at 141.

Query, Which of these will bring me in most interest for the money, and what interest will each of them produce.

To know this, look in the first column, containing 3 per cents. for $82\frac{1}{2}$, and then in column 9, by which you will find that 3 per cents. are at $82\frac{1}{2}$, produce 3 l. 12 s. 8 d. per annum. Then look in column 7, for India Stock, and you will find 165, which shews, that when 3 per cents. are at $82\frac{1}{2}$, India Stock is worth 165, in a due proportion, bringing in the same annual interest of 3 l. 12 s. 8 d. So that by the price in the papers, viz. 141, it appears that India Stock is 24 per cent. cheaper than 3 per cents. at $82\frac{1}{2}$. This rule so obviously gives the just value of all the intermediate funds, that it requires no further explanation.

COURSE of EXCHANGE at LONDON.

Amsterdam, 34 : 6, at 2 usance
 Rotterdam, 34 : 7, at 1-half usance
 * The par is 36s. 7d.

Hamburgh, 32, at 2 1-half usance
 Antwerp, 33 1-half usance
 —The par is 35s. 6d. 2-3ds.

Paris, 30, at 1 usance
 Bourdeaux, 30 3-8ths. 2 usance
 —The par is 31d. 1-4th.

Madrid, 39 7-8ths, at 2 usance
 Cadiz, 39 3-4ths, at 1 half usance
 —The par is 43d.

Leghorn, 49 7-8ths.
 Genoa, 49
 —The par is 54d.

Venice, 51 3-4ths.
 —The par is 50d. 1-4th.

Lisbon, 5 : 6 1-4th.
 Oporto, 5 : 5 3-4ths.
 —The par is 5 : 7 1-half

Dublin, or } 9 3-4ths.
 Ireland }
 —The par is 108 1-3d.

That is 34 schillings and 6 pence, Dutch money, is given or allowed for 1 l. sterl.—Usance is at a month's date, &c.

To this place the exchange is negotiated as to Holland; but the schilling there is rather of more value, which makes the par lower.

That is, 30d. English is given or allowed for one French crown, of 3 livers or 60sols. To Bourdeaux 30d. 3-8ths sterl. per crown.

England allows to these places 39d. 7-8ths and 39d. 3-4ths respectively, for one piafter of Spanish money of eight rials.

To these places England gives 49d. 7-8ths and 49d. ster. respectively for 1 piafter of 120 foldi to the former, and for one pezzo of 115 foldi to the latter.

To this place England gives 51d. 3-4ths for one ducat banco of Venice of 6 lres 1-5th, or 124 foldi; by which it appears that the exchange to Venice is under par, or against London.

London gives to this kingdom pence and parts for a mill ree of 1000 rees.—This exchange is mostly in favour of England.

To this place London gives 100 l. sterl. for 109 l. 3-4ths Irish money.—So that the exchange is above par in favour of London at present, 1 1-half percent. nearly.

* By the Par of Exchange is meant an equality of the money to be exchanged; that is to say, the quantity and quality of one nation's money is supposed to be equal to that of the other, even if they were both to be converted into separate pieces of bullion. Exchanges are mostly rated upon silver coins, and the prices of exchanges are the proportional rates of all negotiations, be they ever so large.—The course of exchange varies almost every day.

A C C O U N T

WEIGHTS, MEASURES, and COINS,

Used in E N G L A N D.

THE weights in common use throughout Great-Britain, are Troy and Avoirdupois; the former consisting of grains, pennyweights, ounces, and pounds, whereof 24 grains make a pennyweight, 20 pennyweights an ounce, and 12 ounces a pound, by which bread (in corporation towns only), gold, silver, and apothecaries medicines are weighed; and to this weight corn measures are reduceable, as 8 lb. troy makes a gallon, 16 lb. a peck, and consequently 64 lb. a bushel; liquid measures are also dependant on it, as their concavities correspond in the different sizes thereto, from a pint, consisting of 12 ounces (or a pound), up to a tun, containing 252 gallons, and weighing 2016 lb. or 1890 lb. avoirdupois; 2 pints make a quart, 4 quarts a gallon (containing 231 cubical inches), 63 gallons a hogshead, 42 a tierce, 126 a pipe, and 252 a tun of brandy, cyder, wine, &c.

Refiners and jewellers also make use of this weight in part; the former calling their smallest fractions blanks, of which 24 make a perit, 20 perits a droite, 20 droites a mite, 20 mites a grain, and then as above. The jewellers divide the ounce into 152 parts, or carats, and these into grains, whereof four make a carat.

By avoirdupois weight, all gross goods and base metals are weighed, such as grocery, rosin, pitch, tallow, soap, butter, cheese, iron, lead, copper, allum, &c. its component parts are drams, ounces, &c. of which 16 drams make an ounce, 16 ounces a pound, 28 pound a quarter of an hundred weight, or 112 pounds, and 20 hundred weight, or 2240 lb. a tun; but besides this hundred weight there is another called the stannery hundred, by which tin, &c. is weighed to the King. The avoirdupois ounce is lighter than the troy ounce by near a twelfth part,

51 ounces troy being equal to 56 avoirdupois; but the avoirdupois pound is heavier than the troy, 17 pound of this latter being equal to 14 pound of the other.

Wool is generally sold by the tod, or clove, allowing seven pounds to the clove, fourteen pounds to the stone, twenty-eight pounds to the tod, 128 pounds to the weigh, 364 pounds to the sack, and 4368 pounds to the last.

Lead is bought by the fodder, which at London, Newcastle, &c. weighs 19 and 1-half hundred weight of 112 pounds; but at Hull 19 and 1-half stannery hundred of 120 pounds; and at Chester, &c. it is still different.

In Essex, butter and cheese are weighed by the clove, (or half stone) being eight pounds, of which thirty-two, or 256 pound is a wey; but in Suffolk forty-two cloves, or 336 pounds, are allowed to the wey. Of butter a firkin must weigh fifty-six pounds, and that of soap sixty pounds, and four firkins of either make a barrel.

A stone of beef at London is eight pounds, but in the country it is commonly fourteen pounds; horse-racers also reckon fourteen pounds to the stone; and it is the same with iron, shot, or wool, double the quantity of iron and shot being called a quarter, though a stone of sugar, cinnamon, nutmegs, pepper or allum, is but thirteen and 1-half pounds.

A faggot of steel is 120 pounds, and a burden of gad steel 180 pounds.

A barrel of gun-powder is 100 pounds, and twenty-four barrels make a last.

A seam of glass is twenty four stone, (of five pounds each) or 120 pounds.

A truss of hay is fifty-six pounds, and a load or tun of it thirty-six trusses.

Raw silk is sold here by the pound of twenty-four ounces, or more properly one pound and an half avoirdupois; but organcines, trames, &c. by the common pound of sixteen ounces.

Of COINS, both Real and Imaginary.

In England, the copper ones are a farthing and a halfpenny, the latter being two of the former.

In fine silver of the standard of 11 ounces two pwts. called sterling, the smallest piece is one penny, others of two pence, three pence, four pence, (called also a groat) and six pence, a shilling, or twelve pence, a half crown, or two shillings and six pence, and a crown, or five shillings.

In fine gold of twenty-two carats, called also sterling, a guinea (now worth

worth twenty-one shillings) half a guinea, quarter of a guinea, and some few two and five guinea pieces.

Accounts are kept in pounds, shillings, and pence, (the first and last imaginary) and exchanges are calculated in one of them two.

In France the gold species are Louis, with its diminution of 1-half and 1-fourth, and its augmentation of double and quadruple.

Of silver the crown or *écu*, with its fractions, which at present passes for three livres, though it has been up to more than seven livres.

Of silver and brass mixed, the *sol*. And

Of copper the *liard*, which is 1-fourth of a *sol*, or three deniers. A double two deniers. And a *denier* or 1-twelfth of a *sol*. But the value of these coins have been so often changed, since May 1718, that it is impossible to ascertain their present value, without recourse to the different ordinances concerning them, which are very long, and would render their quotation more tedious than profitable to our readers, which may justly apologize for an omission of them.

Accounts are kept throughout this kingdom in livres, sols and deniers, of which twelve deniers make a *sol*, and twenty sols a *livre*; their exchange is by the crown of three livres, or sixty sols.

In HOLLAND the GOLD COINS are

Ducats	}	worth	{ 15 guilders and 15 stivers.	
Ducats			{ 5 ——— 5	
Soverains			{ 15	
Rose-nobles			{ 11, though of these very few are seen,	

SILVER COINS.

Ducats	—	—	—	—	}	worth	{ 3 guilders and 3 stivers.	
Drie-guilders	—	—	—	—			{ 3	
Rix-dollar or patacon	—	—	—	—			{ 2 - - - 10	
Croons	—	—	—	—			{ 2. Few to be met with.	
Dollars	—	—	—	—			{ 1 - - - 10	
Goud guilders, or golden guilders	—	—	—	—			{ 1 - - - 8	
Guilders	—	—	—	—	}	worth	{ 1	
							{	

Here are also one half and one fourth rix-dollars; *schellings*, (of which some are worth six, and others only five and an half stivers;) here are also stivers (of which twenty make a guilder) divided into two deniers de gros, or eight duytes, or sixteen penins, though these two last denominations are imaginary.

Here are besides, several other coins, particularly some small ones, of two, three, four, eight, and twelve and an half stivers.

Accounts are kept at Amsterdam and Rotterdam, the two chief trading

ding places, in guilders, stivers and penins; so that although goods are sold for other species, such as livres de gros, &c. yet all are reduced to the above denominations for the entries into their books. The exchanges are made with us in so many schellings to a pound sterling, tho' to most other places in deniers de gros.

Foreign coins are very many, both in gold and silver, but are not current here at any fixed price, but (as other commodities) rise and fall according to their plenty or scarceness.

In PORTUGAL, the CURRENT COINS are many, viz.

In GOLD.				£.	s.	d.
The piece of 25 mil, 600 reas, worth in sterling money				7	4	0
The piece of 24 mil, or 5 moidores	—	—	—	6	15	0
The piece of 12 mil, 800 reas	—	—	—	3	12	0
The piece of 12 mil reas, or two and 1-half moidores				3	7	6
The piece of 6 mil, 400 reas	—	—	—	1	16	0
The piece of 4 mil, 800 reas, or a moidore	—	—	—	1	7	0
The piece of 3 mil, 200 reas	—	—	—	0	18	0
The piece of 2 mil, 400 reas, or the 1-half moidore				0	13	6
The piece of 1 mil, 600 reas	—	—	—	0	9	0
The piece of 1 mil, 200 reas, or the 1-fourth moidore				0	6	9
The piece of 8 teftoons, or 800 reas	—	—	—	0	4	6

The SILVER COINS are,

The crown, or cruzade piece of 400 reas	—	—	—	0	2	3
The 1-10th of a moidore, being 480 reas	—	—	—	0	2	8 1-2
The 12 vinten piece, of 240 reas	—	—	—	0	1	4 1-4
The 5 vinten piece, or 100 reas	—	—	—	0	0	6 3-4
The 2 1 2 vinten piece, or 50 reas	—	—	—	0	0	3 3-8

In COPPER.

The vinten, or 20 reas	—	—	—	—	0	0	1 3-8
The half vinten, or 10 reas	—	—	—	—	0	0	0 5-8
The fourth vinten, or 5 reas	—	—	—	—	0	0	0 5-16

Besides which, there are some few copper coins of less value, current in that kingdom.

Accounts are kept there in reas, making a separation at every hundred, thousand, &c. and it exchanges with London 1000 reas, or a mil rea, for an uncertain number of pence; with Hamburgh, Holland, and all the United Provinces, a crusado for some pence Flemish; with Spain an uncertain number of reas for the ducat or dollar; with France the same for a French crown; with Florence ditto for that crown of seven and 1-half livres; with Genoa the same for a scudi; with Leghorn the same for a dollar of six livres.

TRADES.

TRADESMENS METHOD

FOR

Marking their GOODS for SALE,

WITH

SPECIMENS.

IT saves the trader's memory from a load that would encumber it, or prevents his turning frequently to his bills of parcels, where his memory is deficient, if he has certain marks of his own, and peculiar to himself, that stand for the ten digits; whereby he may put not only the price his goods cost him, in some private corner of the thing or parcel, and likewise what he proposes to sell at, which is an immediate direction to him when a customer demands the price; but such private marks will be highly useful in keeping his day-book in marking the cost price instead of figures. We will produce two or three specimens to the purpose.

1 2 3 4 5 6 7 8 9 10 1 2 3 4 5 6 7 8 9 10 1 2 3 4 5 6 7 8 9 10
QUICKLY SELL.*--FAIR CUSTOM.--GOD SPARE ME.
 Thus the words as above, *Quickly sell*, *Fair Custom*, *God spare me*, having 10 letters each, they represent the ten figures, and to express pounds, shillings, and pence, place them as sums, and you may put down any sum you please, i. e. *qu. ll. l.* is 12*l.* 10*s.* 6*d.* because *qu. ll* and *l.* in *Quickly sell*, are 1, 2, 10, and 6. Again, *ai. s. m.* or 23*l.* 7*s.* 10*d.* are in the words *Fair Custom*; *g. s. e.* or 1*l.* 4*s.* 10*d.* are in the words *God spare me*; and so of every sum great and small. Now, to distinguish the price goods cost from the selling price, a different place may be chosen; or else it may be the custom to place one above another with a line between, to render it more puzzling to another person, as *qu. l.* or 12*l.* 6*s.*

ql. s. or 16*l.* 8*s.*

Another good method is to invert the order of the ten figures, and call
 1 2 3 4 5 6 7 8 9 10
 10, 1, &c. as 10, 9, 8, 7, 6, 5, 4, 3, 2, 1; so 1*l.* 2*s.* 8*d.* would be 10 9 3, &c.

* LL must be reckoned but as one letter

The cart load of gravel contains 20 strikes heaped up, each strike weighs one hundred and an half; so that each load weighs 30 hundred weight.

The usual price of a team and two carts is from seven to eight shillings per day; they work eight hours each day, and move at the rate of two miles and a half in one hour.

N. B. It is here supposed that the roads are tolerable good and level; if not, reasonable allowance should be made.

The ANGLERS ASSISTANT, or an epitome of the whole depths for catching all sorts of fish usually angled for : also all the treatises ever wrote on the subject, exempt from

Names	Where found.	Season	Ti. to ang.
Bream	rough str. river or mid pond	Apr. to Mich	S. rise to 9 3 to S. set

line is commonly used, that is, five or six hooks on a line, about four or five inches following pages.

DESCRIPTION

OF

PROPER BAITS

FOR THE

SEVERAL SORTS OF FISH,

Referred to in the foregoing TABLE.

FLIES.

1. **STONE-FLY**, found under hollow stones at the side of rivers, is of a brown colour, with yellow streaks on the back and belly, has large wings, and is in season from April to July.

2. **Green-Drake**, found among stones by river sides, has a yellow body ribb'd with green, is long and slender, with wings like a butterfly, his tail turns on his back, and from May to Midsummer is very good.

3. **Oak-Fly**, found in the body of an old oak or ash, with its head downwards, is of a brown colour, and excellent from May to September; for trout, put a cod-bait or gentle on the point, and let it sink a few inches in clear water.

4. **Palmer-Fly**, or worm, found on leaves of plants, is commonly called a caterpillar, and when it comes to a fly is excellent for trout.

5. **Ant-Fly**, found in ant-hills from June to September.

PASTES.

1. Take the blood of sheeps hearts, and mix it with honey and flower worked to a proper consistence.

2. Take old cheese grated, a little butter sufficient to work it, and colour it with saffron; in winter use rusty bacon instead of butter.

3. Crumbs

3. Crumbs of bread chew'd or work'd with honey (or sugar) moistened with gum-ivy water.
4. Bread chew'd and work'd in the hand till stiff.

W O R M S.

1. The Earth-Bob, found in sandy ground after plowing ; it is white, with a red head, and bigger than a gentle. Another is found in heathy ground, with a black or blue head. Keep them in an earthen vessel well covered, and a sufficient quantity of the mould they harbour in. They are excellent from April to November.

2. Gentles, to be had from putrid flesh ; let them lie in wheat bran a few days before used.

3. Flag-Worms, found in the roots of flags ; they are of a pale yellow colour, are longer and thinner than a gentle, and must be scowered like them.

4. Cow-Turd-Bob, or Clap Bait, found under a cow-turd from May to Michaelmas ; it is like a gentle, but larger. Keep it in its native earth like the earth-bob.

5. Cadis-Worm, or Cod-Bait, found under loose stones in shallow rivers ; they are yellow, bigger than a gentle, with a black or blue head, and are in season from April to July. Keep them in flannel bags.

6. Lob-Worm, found in gardens ; it is very large, and has a red head, a streak down the back, and a flat broad tail.

7. Marsh-Worms, found in marshy ground. Keep them in moss ten days before you use them ; their colour is a bluish red, and are a good bait from March to Michaelmas.

8. Brandling Red-Worms, or Blood-Worms, found in rotten dunghills and tanners bark ; they are small red worms, very good for all small fish, have sometimes a yellow tail, and are called tag-tail.

F I S H and I N S E C T S.

1. Minnow. 2. Gudgeon. 3. Roach. 4. Dace. 5. Smelt.
6. Yellow Frog. 7. Snail Slit. 8. Grasshopper.

E X A M P L E S

To explain the

USE OF THE FOREGOING
TABLES of VALUATION.

EXAMPLE I.

IF one pound of tea costs 6s. 7d. 3 farthings, what will 200 pounds come to? Answer 66l. 9s. 2d.

Look first for the column with 6s. at the top, and then (under the first column of the page) for 200; direct your eye from thence to the opposite sum, under the column of 6s. and you will find it 60l. then go backwards to the column which has 7d. at the top, and look for 200 on the column of the page; 200 seven pences you will find is 5l. 16s. 8d. to this add 200 three-farthings, which is 12s. 6d. and the whole amounts to 66l. 9s. 2d. Thus,

200 lb. of tea, at 6s. per lb.	_____	_____	60	0	0
200 lb. of ditto, at 7d. per lb.	_____	_____	5	16	8
200 lb. of ditto at 3-farthings	_____	_____	0	12	6
			<hr/>		
			66	9	2

EXAMPLE II.

What does 500 weight, three quarters of tobacco amount to, at 10d. halfpenny per lb.

Look for the column with 10d. at the top, and then for the sum opposite 112, in the first column, which is 14l. 13s. 4d. to this add the two farthings, which is 4s. 8d. Multiply these sums by 5, and the product will be the sum of 500. In the same manner proceed afterwards to find the

the amount of three quarters, or 84 lb. and the product of the whole will be 28l. 3s. 6d. Thus,

One hundred weight, or 112 lb. at 10d. 2f. per lb. will come to

			4	13	0
		Which multiplied by			5
The amount of 500 weight will be	_____	_____	24	10	0
84 lb. or 3 quarters, will amount to	_____	_____	3	13	6
The total amount of 500 weight 3 quarters	_____	_____	28	3	6

EXAMPLE III.

In 659 farthings, how many shillings are contained?

Look for 200 in the first column of the table of one farthing, page forty-seven, and observe, that the next opposite sum is 4s. 2d. which, multiplied by three, makes 12s. 6d. This done, look for the sum opposite to fifty; and, at last, to that against nine; all which sums added, shew, that in 659 farthings are contained 13 s. 8 d. three-farthings.

300 farthings make	_____	_____	_____	0	6	3
		Multiplied by				2
600 farthings make	_____	_____	_____	0	12	6
50 farthings	_____	_____	_____	0	1	0 1-2
9 farthings	_____	_____	_____	0	0	2 1-4
659 farthings	_____	_____	_____	0	13	8 3-4

MAXIMS and RULES relating to drawing BILLS.

1. **B**ILLS are either foreign or domestic. Foreign bills are usually payable in London, and other parts of England, at single, double or treble usance, that is, at one, two, or three months after date.

2. Domestic bills are usually payable, either at sight, or some number of days after.

3. A foreign bill, payable at usance in London, is payable a month and three days (according to the custom of London) after the date of the bill.

4. If a foreign bill is not paid when due, it must be protested in the office of a public notary, who protesteth against the drawer, he on whom
it

it is drawn, &c. for all charges, re-charges, and interest to be paid by them.

5. After the bill is protested, the protest and bill is registered, and then the protest is returned; but 'tis usual, in kindness to him on whom it is drawn, to keep the bill three or four days longer.

6. If the bill is not yet paid, it is usual to go upon the exchange to see if any body will pay the said bill, for the honour of the drawer.

7. If any one is found that will pay it, he must likewise pay you the charges of the protest, and also the interest and other charges, which he afterwards charges on the drawer.

8. But if no one be found that will pay it, then the bill must be returned, with the charges, interest, &c. to the drawer.

9. By an act anno 9 and 10 Gulielmi III. Regis, it is enacted, that in such cities, towns or places, where no notary public resides, any substantial person of the city, town or place, in the presence of two or more credible witnesses, may act as such, refusal or neglect being first made of due payment of the same. And by an act anno 3 and 4 Annæ Regiæ, it is enacted, that all notes payable to any person or order, shall be assignable over in the same manner as inland bills of exchange are, or may be; and that any person to whom such note is indorsed, may maintain an action either against the person who signed such note, or against any of the persons that indorsed the same.

10. The allowance for payment, over and above usance, is different, according to the country. As

Days			Is allowed after the single, double, &c. usance.
At	London	3	
	Rotterdam	6	
	Rowen	5	
	Paris	10	
	Hamburg	12	
	Antwerp	14	

11. Though usance generally signifieth a month in bills drawn to and from London, yet from Venice to London, single usance is three months.

12. When you have money to receive from a foreign correspondent, you are to make your case known to an exchange broker, who will procure persons that will pay you your money here; you giving them your bill for the like sum, payable to their order by your correspondent; and in this case, you are to enquire how the exchange goes to such a place where the money is payable, and make your bargain as to exchange as well as you can; which having done, draw your bill, mentioning the sterling coin, at so much foreign coin, for so much sterling.

A TABLE of FEES,

To be taken by clerks to Justices of the Peace in the county of Wilts, made at the general quarter-sessions of the peace held at Warmister, in and for the said county, in the week next after St. Thomas a Becket last past, by the Justices then and there assembled; and afterwards reconsidered and settled at the general quarter sessions of the peace, held at Marlborough, in and for the said county, in the week next after Michaelmas last past, by the Justices then and there assembled; and afterwards referred to, and ratified and confirmed by, the Justices of Assize of the western circuit, pursuant to an act of parliament passed in the twenty-sixth year of the reign of his late Majesty King George the Second, entitled, *An act for settling and ascertaining the fees to be taken by clerks to Justices of the Peace, viz.*

FOR every ale-house licence, with the recognizance, (excluding stamps and the clerk of the peace's fee for enrolling the recognizance)		£.	s.	d.
Every recognizance to appear and answer,	—	0	4	6
Every recognizance to appear and prosecute,	—	0	2	6
An information, or examination, whereon to ground a warrant, one shilling; but if two or more examinations are necessary, no more to be paid,	—	0	1	0
Every warrant on information and examination,	—	0	1	0
Every warrant to search or apprehend,	—	0	1	0
Every warrant of distress for poor or highway rates,	—	0	2	0
Every warrant of appointment of surveyors of highways,	—	0	2	6
Every warrant to impress carriages for soldiers,	—	0	1	0
Every mittimus or commitment, except felony,	—	0	1	0
Every order of removal, with duplicate and examination included,	—	0	4	6
Every order of bastardy, with duplicate and examination of the woman,	—	0	4	0
Every pass to convey a vagrant, with duplicate,	—	0	2	6
Every certificate thereon,	—	0	0	6

Confirmation

Confirmation of every poor or highway rate at a petty sessions, _____	o	1	o
Such confirmation at another time, _____	o	2	o
Indentures of apprenticeship by parish officers, stamps, and confirmation, _____	o	3	6
Swearing the witnesses, and allowing certificate of legal settlement, _____	o	2	o
Drawing the certificate, _____	o	1	o
Drawing information, one shilling, precept to summon, six-pence, warrant of distress, one shilling and six pence, conviction, and duplicate thereof, three shillings and six-pence, mittimus one shilling, on prosecution upon the game laws, _____	o	7	6
For every precept to summon, though several names, _____	o	o	6
A certificate of a road being put in repair, in order to discharge a presentment or indictment, _____	o	2	o
An information and conviction for paying wages in goods instead of money, in the woollen manufacture, _____	o	3	4
A supersedeas, _____	o	1	o
A liberate, _____	o	1	o
Every recognizance and return of supplicavit, _____	o	6	8
Recognizance to prosecute an information in the King's-bench, _____	o	2	6
An order for payment of wages in husbandry, _____	o	1	o
Each summons, judgment, and warrant of distress on tythes, _____	o	1	o
Each summons, judgment, and warrant for detaining wages in the woollen manufacture, _____	o	1	o
All proceedings in the act against prophane swearing, _____	o	1	o
Every warrant of hue and cry, _____	o	1	o
Every warrant of appointment of overseers of the poor, _____	o	2	o
No fee is paid for precepts to summon overseers to shew cause why poor persons should not be relieved, for orders made for such relief, for certificates relating to the horned cattle, nor for any proceedings in matters relating to felony.			

FOREIGN MAILS

AND

POSTAGE.

THE mail from the West-Indies goes from London every first Saturday; and the mail by the way of New-York, for the continent of North America, goes the second Saturday in every month. The postage must be paid at the delivery into the post-office in Lombard-street; and all letters put into other post-houses in Great-Britain and Ireland, must, over and above the rates hereafter mentioned, pay also the full inland post to London.

RATES of POSTAGE from LONDON.

To the islands of Barbadoes, Guadalupe, Antigua, Montserrat, Nevis, St. Christophers, and Jamaica, a single letter, 1s. 6d.—double, 3s.—treble, 4s. 6d.—an ounce, 6s.

To New-York, New-England, Virginia, Maryland, and all the other colonies on the continent of North-America, a single letter, 1s.—double, 2s.—treble, 3s.—an ounce, 4s.

The Mails go out for foreign parts on the following nights.

To Italy, Holland, Germany, Denmark, Sweden, &c.

To Flanders, and from thence to Denmark and Sweden, Tuesday and Friday.

The Mails are due from foreign parts as follows.

From Holland, Monday and Friday.

From Flanders, Monday and Thursday.

From Ireland, Monday, Wednesday and Friday.

* * There is always an officer in waiting to dispatch expresses to any part of the kingdom, at any hour, either of the day or night.

A CON.

A

CONCISE and EASY

M E T H O D

OF WRITING

S H O R T - H A N D.

SHORT-HAND ought to be brief, distinct and easy. The shortest expression is a point, from which all characters flow.

The production of a point generates a line: the most simple is a right line. —

A line may be varied in position; and will strike us with a different conception of it, as it is differently formed. It may be placed four different ways; horizontally —, vertically |, inclined to the right hand \, or to the left /. Thus we gain four characters.

Each of these lines may be bent into a curve, toward the one side, or toward the other; and will therefore supply two curves. To instance in the horizontal or vertical lines \approx)(.

The two inclined lines would also furnish four inclined curves: but these are rejected, to avoid ambiguity.

These then are all the marks which can be termed simple. Whatever characters we need more, must be obtained by composition.

The only regular composition will be that of a right line and a curve. This one composition will supply our wants. For by this we are furnished with four variations to each of the four positions of the right line.

The connexion of these characters will make no confusion; since none of them being angular, all angles will denote the junction of letters.

The letter *z*, or *s*-hard, is so seldom used, that it may be totally disregarded; or the character for *s* may be strengthened for *z* in writing. And the *j*, which is rarely used, may be sunk in the *g*.

Let us now arrange the letters in the progressive order of their numbers; and add their proper characters under them. When it will appear that the characters of the simplest expression are applied to those letters which are in most frequent use. See Table I.

Although a character is here supplied for every letter, it is not necessary that every letter be expressed in short writing. There are in every word some radical letters essential towards its formation: these are the leading letters in composing the sound when spoken. These are generally the consonants.

The vowels, being liquid expressions of the voice, not often of farther use than to connect the pronunciation of several consonants, may therefore be struck out of the alphabet. *y* is a kind of amphibious letter, and rarely a consonant. Its chief use as a consonant is the personal pronoun *you* and *your*: but for the words the letters *v*, and *w*, may conveniently stand.

The three letters, *c*, *k*, *q*, having the same power, may be represented by one mark. When the *c* is sounded soft, the letter *s* naturally supplies its place. The letter *q* never appears without being followed by *u*; in which circumstance *k* is equally sufficient.

As *v* and *w* are nearly alike in property, one character may suffice for them. If a distinction be thought needful, a little extraordinary stress laid on the pen may mark it.

The last reduction will be to exterminate *x*; a mark hardly to be esteemed a single letter, but rather a character, expressive of the composition *ks*. As therefore no word in the English language begins with it, the characters for *k* may be used for it.

The alphabet, thus retrenched, consists of fourteen essential letters:

b d f g h k l m n p r s t v.

which are expressed in the table referred to.

This set of characters appears to be the simplest possible, reducible to practice: the fewest in number, the easiest in form, and consistent with general use. This is the short-hand we have been hitherto seeking, methodical in its construction, and built upon rational principles.

The elements of Short-Hand being comprised in fourteen characters, there is no extraordinary skill required in joining them to express words; the many instructions for this purpose given in books, being chiefly directions how to violate the principles and rules therein first laid down. Few examples are given (see Table II.); the rather because experience will soon teach to every person the most convenient forms

forms of composition, sooner than tedious endeavours to imprint on memory prescribed rules: and because each person will of course, in defiance of general methods, contract peculiar modes of practice. The words in this table consist of a promiscuous collection, not purposely chosen to shew the methods to the best advantage. For had this been done, these characters are susceptible of many neat and happy forms of compositions, which do not all occur in the table, and which practice will discover. Neither is the reader troubled with grammatical distinctions. He is already supposed to have some previous knowledge of grammar, else he can have no occasion for short-hand: an art, in which speed is the main object: to improve which, precision and elegance are frequently dispensed with. It may be observed in general, that whenever any obscurity may happen in short-hand, the connection of the sense will assist in clearing it; which indeed is no more than we are frequently obliged to trust to, in reading common writing.

Should any person imagine this alphabet imperfect, in wanting an expression for the article *A*, the point . may be retained for it; and the close of a period may be noted by a vacant space a little longer than what you use between each word.

Number is already expressed in short-hand, in a most happy manner. All the units under ten, have a different sign to denote them by; four or five of which are capable of expressing sums of many thousands. All therefore that is necessary, is to use a point . instead of a cypher. The cypher is of no farther use than to note the places of annexed figures; for which purpose a point is equally serviceable, and more easily made.

Divinity, law, politics, physick, &c. have many technical terms frequently occurring, which, according as the present exigence may hint, initial capitals in common writing hand may stand for. For nothing should be accepted as a symbol, which is not strikingly figurative. And whatever is written hieroglyphically, ought to be distinguished from the regular characters, either by size or stress of hand.

To conclude: It is hoped that the principles here laid down, and the characters thence deduced and recommended, may be such, that every person may form to himself a method from them the most clear, regular, and *consistent with those indispensable properties*, the shortest possible. We would only wish the reader, while he looks over the following tables, to observe once more, that all vowels are dropt, and the essential consonants constitute the word.

L I S T

O F T H E

Palaces, principal Places, Universities, chief Seats, and
Curiosities of ENGLAND, most worthy the Travel-
ler's Notice.

MOUNT-EDGE CUMBE, a fine seat of Lord Edgumbe's, in
Cornwal, situate on the promontory called the Ramhead, a no-
ted sea mark.

Corfe-Castle, in the isle of Purbeck, in Dorsetshire: it was partly
demolished in the time of the civil wars, but the ruins still retain great
marks of its strength and grandeur.

Eastbury, the seat of the late Lord Melcombe, near Blandford, in the
parish of Gunfield, Dorset.

Winburn St. Giles, near Cranborne, Dorset, the seat of the Earl of
Shaftesbury.

Bristol, the second city in the British dominions for trade, wealth, and
number of inhabitants.

The Hot Wells, about a mile from this city, which are much fre-
quented in July and August; their waters for many distempers being
esteemed better than those of Bath.

Bath, in Somersetshire, 16 miles from Bristol, and 120 from Lon-
don. Many are the diseases which find a remedy from the use of these
waters, and innumerable the resort to them of all degrees of people.
The two seasons here are spring and autumn: the spring begins in
April, and ends in June; the autumn with September, and lasts till Fe-
bruary. In the spring it is much frequented for the sake of health, and
in the fall for pleasure; where a great number of the gay world drink
the waters merely for a pretence to mix with the company at the pump-
room, and to give a colour for coming to an infirmary for pleasure.—
Prior-park,

Prior-park is near this city, the seat of the late great and good Ralph Allen, Esq;

Cheddar, near Axbridge, in Somersetshire, famed for the finest cheese in the world except the Parmesan. Above this town there is a chasm of a mile long, called Cheddar cliffs, between two tremendous rocks, which seem to have been rent asunder, with hollows awful and surprising, between two and three hundred feet high.

Salisbury, in Wilts, 79 miles from London, one of the most delightful and pleasant cities in the kingdom, uniformly laid out in chequers, with rivulets flowing through the streets, which are spacious and clean, and, were the building in general more modern, it might vie with any city in the kingdom; for its situation is beautiful, surrounded with an open, healthy sporting country, abounding with noblemen and gentlemen's seats. The cathedral is esteemed one of the most elegant Gothic structures in the world; so extremely light and airy, that it has often been compared to a lanthorn, and its spire many feet higher than the cross on the top of St. Paul's in London. The market-place of this city is a handsome square, so large and spacious, that several regiments of soldiers may very commodiously be drawn up in it. Besides the cathedral, there are in the city and suburbs four other churches; and on the new canal is a large and elegant assembly room, in which is either a concert or assembly every week, that never fails of a polite and agreeable appearance of company, especially of the fair sex, who have ever been the peculiar boast and ornament of the city.

Wilton, the county town, and seat of the Earl of Pembroke, an ancient building on the ruins of an old monastery, beautifully situated, and finely watered. This elegant seat may be considered as a perfect repository of curious antique statues, bustos, and paintings, scarcely to be equalled in Europe.

Stonehenge, seven miles N. W. of Salisbury, reckoned one of the wonders of this kingdom, which has filled the beholders with astonishment, and attracted the admiration of all ages: it is supposed to have been a grand temple of the British Druids.

Portsmouth, in Hants, 73 miles from London, the great key of England, regularly fortified.

Silchester, on the borders of Berkshire, between Reading and Basingstoke, being the ruins of the ancient city Vindomis, or Vindonium, built by Constantine the younger.

The Isle of Wight, opposite to Hampshire, 22 miles in length, 12 in breadth, and 60 in circumference, divided into 29 parishes. The principal town is Newport, a very ancient borough, large and populous, and much enriched by its plenty and commerce.

Windsor town, castle, chapel, terrace, and parks, in Berkshire, 24 miles from London, situate on the river Thames.

Richmond, in Surry, 12 miles from London, remarkable for its beautiful situation, royal palace, and gardens.

Canterbury, fifty-six miles from London, the metropolitan see of all England.

Rochester, in Kent, the oldest see in England, thirty miles from London.

Chatham, in Kent, the completest naval arsenal in the world, thirty miles from London.

Dover town, castle, and cliffs, 71 miles from London. These cliffs are beautifully described by Shakespear in his tragedy of King Lear.

Tunbridge Wells, in Kent, five miles from Tunbridge, 34 from London, much frequented on account of its mineral waters.

Margate, in the isle of Thanet, in Kent, seventy-two miles from London.

Ramsgate, in the same island.

Woolwich, nine miles from London, is the mother dock of the royal navy.

Greenwich, five miles from London, where is the most magnificent hospital in the world for decayed seamen.

London, in Middlesex, the metropolis of England, and capital of all the British dominions, and the most celebrated city in the whole world for the number and wealth of its inhabitants, commerce, &c.

Chelsea, two miles from London, remarkable for its hospital for wounded and superannuated soldiers, and also for Ranelagh-house and gardens for the entertainment of the public.

Hampton Court, 12 miles from London, a sumptuous palace, founded by Cardinal Wolfey.

Woburn Abbey, in Bedfordshire, 44 miles from London, a noble palace of the Duke of Bedford's.

Earl Temple's seat, at Stow, in Buckinghamshire, where are the most magnificent gardens in England.

The city and university of Oxford, 55 miles from London.

Blenheim house, a stately palace, at Woodstock, six miles from Oxford, the seat of the Duke of Marlborough.

Hanwell Park, near Banbury, the seat of Sir Jonathan Cope; where is a clock that moves by water, and shews the hour by the rise of a new gilded sun for every hour.

Badmington Magna, in Gloucestershire, the Duk of Beaufort's seat.

Chertow in Monmouthshire, on the borders of Gloucestershire, 131 miles from London.

Malvern hills and wells, near Worcestershire.

Warwick town and castle, 88 miles from London.

Northampton, sixty-six miles from London, a very handsome, large town.

Duke of Grafton's seat, eight miles from Northampton.

Duke of Montagu's seat, built after a model of the palace at Versailles, twelve miles from Northampton. The gardens belonging to this seat contain 90 acres of ground, adorned with statues, urns, fountains, avenues, canals, wildernesses and terraces, with a fine cascade and river running through the whole.

The Earl of Exeter's, at Burleigh, near Stamford, one of the greatest structures in England, and finely adorned.

The Earl of Northampton's at Castle-Ashby, six miles from Northampton.

The Earl of Suffex's, at Easton-Manduit, near Wellingborough.

The Earl of Cardigan's, at Dean, 18 miles from Northampton.

Lord Sondes's, at Rockingham castle, originally built by William the conqueror.

The Earl of Halifax's, at Horton, near Northampton.

The Earl of Westmoreland's, at Apethorp, near Oundle.

The Earl of Peterborough's, at Drayton, sixteen miles from Northampton.

The Earl of Pomfret's, at Easton.

Viscount Spencer's at Althorp, four miles from Northampton.

Earl of Stafford's, at Boughton, two miles from Northampton.

The Earl of Exeter's, at Woodthorp, near Harborough.

Earl of Peterborough's, at Thrapston, sixteen miles from Northampton.

Lord Carbery's, at Laxton.

Earl of Sandwich's, at Henchenbroke priory, in Huntingdonshire.

The Earl of Lincoln's, at Overton Longvill, three miles from Peterborough.

The town and university of Cambridge, 52 miles from London. This university, for its antiquity, privileges, colleges, discipline, revenues, number of students, and other necessities for the advancement of learning, may challenge equality with almost any other in Europe. The town is very ancient, known in the time of the Romans by the name of Cambontum. William the Conqueror built a castle here, of which only the gate-house is still standing, which is used for the county goal. It has 14 parish churches, and contains upwards of 1200 houses.

The Duke of Bedford's seat, at Thorney-abbey, near Cambridge.

The Earl of Godolphin's, at Gogmagog-hills, ditto.

The Earl of Hardwick's, at Wimple, formerly Lord Oxford's.

Lord Viscount Irwin's, at Erxning, near Newmarket.

Ipswich, in Suffolk, 68 miles from London, and 12 from Harwich, contains 12 parish churches, two chapels, and meeting house, with a convenient key and custom-house.

The Duke of Grafton's seat at Euston-hall, three miles from Ixworth.

The Earl of Bristol's, at Ickworth park, two miles from Bury.

The Earl of Rochford's, at Easton,

The

The city of Norwich, in Norfolk, 109 miles from London, near two miles in length and one in breadth. A very large manufacture is carried on in this city in stuffs and crapes, in which are supposed to be employed 20,000 men, women and children. It has thirty-two churches, besides the cathedral. Here are also two churches for the Dutch and French Flemings, who enjoy singular privileges here. The Duke of Norfolk's palace is here, once reckoned the largest in England.

Lyn Regis, in Norfolk, 90 miles from London, an ancient town, at the mouth of the Ouze.

The Earl of Orford's seat, at Houghton, called Houghton-hall, a house of state, with conveniencies fit for a prince.

Boston, in Lincolnshire, 114 miles from London, on the river Witham, which is navigable to Lincoln; a pleasant well built town, with a good trade, where is the largest parish church without cross isles in the world.

The city of Lincoln, 128 miles from London, anciently called Nicol. This city is a county of itself; it formerly abounded with monasteries. Here is the finest great bell in England, called Tom of Lincoln, near five tons weight, and will hold 242 gallons.

The Duke of Rutland's, at Belvoir castle, near Grantham.

Grimsthorp, the Duke of Ancaster's.

The Earl of Lincoln's, at Lempringham, 10 miles from Grantham.

The Earl of Winchelsea's, at Burley on the hill, near Okeham.

Leicester, the chief town of Leicestershire, ninety-eight miles from London.

Bosworth, 104 miles from London. Three miles from this town is the field of action, called Redmore plain, so noted for the decisive battle between the houses of York and Lancaster, in which Richard the third was slain. A very considerable manufacture of weaving stockings is carried on here. In a meadow near this town was formerly a monastery, where Cardinal Wolsey died. In one of the churches of this town is an epitaph on one Heyric, who died in 1589, aged 76, after living in one house with his wife 52 years, without burying man, woman, or child, though sometimes twenty in family.

Nottingham, 122 miles from London, one of the neatest places in England, near which are said to be more gentlemen's seats than any place again. In the Duke of Newcastle's park there is a ledge of perpendicular rocks, hewn into a church, houses, chambers, dove-houses, &c.

Newark upon Trent, 118 miles from London, and eleven from Nottingham.

Mansfield, in the same county, 136 miles from London.

Earl of Chesterfield's seat, at Shelford Abbey, five miles from Nottingham.

In Derbyshire, the black mountains, called the Peak, an eminence

abounding with many wonderful curiosities, reduced to seven, viz. Chatsworth-house, the magnificent palace of the Duke of Devonshire. 2. The Mamtor, or Mother Tower. 3. Elden-hole, a terrible chasm in the side of a mountain. 4. Buxton Wells. 5. Tides Wells. 6. Poole's Hole. In this cavity, which is above a quarter of a mile long, and of a considerable height, not unlike the roof of a cathedral, are many surprising representations, both of nature and art, produced by the petrifying water continually dropping from the rock. 7. The Devil's Arse, or Peak's Arse, a cavern under a steep hill near Castleton. Besides these, there are other rarities and curiosities in these parts, well worth the traveller's notice and inspection.

Derby, 122 miles from London, famous for making malt and brewing ale, both of which are sent to London in great quantities. In an island of Derwent, facing this town, is a famous machine, erected in 1734 by the late Sir Thomas Lambe, for the manufacture of silk: the model of which he brought from Italy, at the hazard of his life: it contains 26586 wheels. By which machinery one hand-mill twists as much silk as could be done before by 50.

Seats in this county: The Duke of Devonshire's, afore-mentioned in the Peak, a stately and elegant structure, which it would take up too much room to describe. Duke of Rutland's, at Huddon-hall. Duke of Dorset's, at Croxhall. Earl of Chesterfield's, at Bretby. Earl of Ferrers's, at Shirley. Lord Scarfsdale's, at Keddleston-hall.

The city of York, 107 miles from London, pleasantly situated in a large plain or valley in the midst of the shire, in a healthy air, contains 28 parishes, has a handsome mansion-house: its chief magistrate has the title of lord mayor.

Harrogate, in this county, famous for medicinal springs of various sorts, which, though near together, yet are very different in their operations, some sweet, some stinking.

Pontefract town and castle, 18 miles from York.

Sheffield, 163 miles from London, a large thriving and populous town.

Halifax, 104 miles from London, one of the most populous and extensive parishes in England, being 30 miles in circumference, and has 12 chapels and 16 meeting-houses, and full of inhabitants, who carry on a large woollen manufacture.

Leeds, 14 miles from Halifax, famous for the woollen manufactory carried on, and one of the largest and most flourishing towns in the county, in which are buildings and other curiosities well worthy the traveller's notice.

Near Kirkles, six miles from Halifax, is the monument of the famous Robin Hood, with an inscription on it.

Beverly, eight miles from Hull, remarkable for its pleasant situation and great plenty of all the necessaries of life. Here are also many antiquities,

tiquities, structures, and other curiosities deserving attention. The minster here is one of the most elegant churches in England, few cathedrals exceeding it.

Hull, called Kingston upon Hull, is 176 miles from London, a seaport of great foreign trade; and more merchant ships belong to it, it is said, than any other port in England, except London, Bristol, and Yarmouth.

Scarborough, 43 miles from York, 222 from London, an ancient, not large, but well built sea-port town, of good trade, and much benefited by the great number of persons that resort to it every year to drink the waters of its chalybeate spring: its qualities are a compound of vitriol, iron, allum, nitre, and salt; has a pleasant acid taste, and an inky smell: they are purgative and diuretic. Here are elegant accommodations for the company, and assemblies, concerts, and balls, as at Bath and Tunbridge.

The principal seats in this county are, Sheffield Manor; the Duke of Norfolk's; Wentworth Castle; Earl of Strafford's, two miles from Barnsley.

Sandbeck, near Tickill, Earl of Scarborough's.

Wentworth, near Rotherham, the Marquis of Rockingham's.

Studley, Mr. Auditor Aislaby's, where is a park, or rather garden, which art and nature have joined to render it one of the most delightful spots in England.

Londesburgh, Lord Burlington's.

Castle-Howard, near Malton, Earl of Carlisle's.

Hornby-Castle, near Richmond, Earl of Holderness's, &c. &c. &c.

Durham, a city in the county Palatine, 256 miles from London, situated on a hill almost surrounded with water.

Bishop-Auckland, one of the best towns in the county, six miles from Durham, pleasantly situated on the side of a hill, in a fine healthy air.

Bilcheffer, where are large ruins of walls, and Roman coins, called Bincheffer Pennies, with inscriptions, seals, urns, and other marks of antiquity, have been dug up in numbers.

Newcastle, in Northumberland, 270 miles from London, an ancient town and port, the glory of the county: it is called Newcastle upon Tyne, to distinguish it from Newcastle under Line, in Staffordshire.

Berwick, 333 miles from London, situated at the mouth of the Tweed, fortified with a strong castle, the last town in the north of England.

The chief seats in Northumberland are, the Earl of Northumberland's, at Alnwick: the Earl of Carlisle's, at Morpeth-castle; the Earl of Tankerville's, at Chillingham; and Sir Walter Blacket's, at Newcastle.

Carlisle,

Carlisle, in Cumberland, seven miles from Scotland, 301 from London, once a flourishing city, and one of the Roman stations: it is a sea-port, but of no great trade, though wealthy, populous and well built. In the middle of the city is the cathedral.

Bullnesh, in Cumberland, at the utmost limits of the province of Britain. Here Antoninus began his itinerary. A mile to the north of this place begins the famous Picts walls. In this are more Roman antiquities than in any other county in England.

The chief seats in this county are, the Duke of Norfolk's, at Drum-burg castle; the Earl of Carlisle's, at Naworth; and the Earl of Sussex's, at Kirk Oswald, 13 miles from Carlisle.

Appleby, 267 miles from London, the county town of Westmoreland.

The chief seats in this county are, the Earl of Thanet's, at Pendragon castle, 12 miles from Appleby; the Earl of Derby's, at Beltham castle; and Sir James Lowther's, at Lowther-hall.

Lancaster, the shire town of Lancashire, 233 miles from London, a sea-port, with a harbour and custom-house. The castle here is esteemed one of the fairest monuments of antiquity in the kingdom.

Preston, 18 miles from Lancaster, 211 from London, a beautiful place; which, for its situation, delightful eminence, handsome streets, and variety of company in and near it, is esteemed one of the prettiest retreats in England.

Liverpool, 185 miles from London, an ancient town, but a very populous and flourishing sea-port, nearly equal to Bristol. Here are handsome churches, a town house, exchange and custom-house, a commodious elegant structure.

Manchester, 181 miles from London. Here is the best trade carried on of any town in the north, and surpasses all thereabouts in buildings, manufactures, spacious market-place, and college. As the Hague, in Holland, is called the most magnificent village in Europe, so Manchester may, with equal propriety, be said to be the greatest village in England; the chief magistrate being only a constable, or headborough, though it is more populous than York, and many other cities in England.

The principal seats in this county are, the Duke of Hamilton's, at Ashton-hall; Lord Willoughby's, at Shaw-place and Worsley; Lord Viscount Moleneaux, at Croxteth-hall.

Chester, the county town of Cheshire, commonly called West-Chester, is 182 miles from London, a large, fine, well built city, full of wealthy inhabitants, who drive a very considerable trade. Here are 11 parish churches; the great church is a stately venerable pile, and looks very antique. The adjacent country is the richest in pasturage of any in the north of England, as is plain from its great produce of cheese, of which, it is said, London takes off 14000 tons annually.

Nantwich,

Nantwich, 14 miles from Chester, a fine, large, well built town, the streets regular, adorned with many gentlemen's houses. Cheese and salt are made here to the greatest perfection, and in great quantities.

The chief seats in this county are; the Earl of Cholmondeley's, at Cholmondeley-hall; Lord Delamere's, at Dunham-massey; the Earl of Barrymore's, at Rock-savage; the Earl of Dyfert's, at Woodhay, five miles from Nantwich; and Lord Grosvenor's, at Eaton, near Chester.

Litchfield, a city, (and joined with Coventry makes a bishoprick) 119 miles from London. Here are three churches and a cathedral, which is a noble structure, its portico or front scarcely to be paralleled in England.

Stafford, 134 miles from London, and the shire town, well built and paved, containing two churches, a free-school, and spacious market-place.

Wolverhampton, 117 miles from London, famous for lock-smiths. A lock, with a curious set of chimes in it, said to made here, was sold for 20l.

Dudley Castle, four miles from Wolverhampton, which stands on a high mountain, cut out of a rock, with a lofty tower on it, whence is a very fine prospect. In the hall of this castle is a table of one entire oak plank, 17 yards in length, and a yard in breadth, which at first, 'tis said, measured seven yards and nine inches more, but were cut off to suit the hall. The tree grew in the park at Dudley, and was said to contain 100 of timber.

Chief seats in this county are, the Duke of Bridgewater's, at Newborough, five miles from Litchfield; the Earl of Berkshire's, at Elford; the Earl of Uxbridge's, at Beaudefert; Earl of Dartmouth's, at Sandwell; Earl of Stamford's, at Enfield-hall; Earl Gower's, at Trentham; and Lord Chetwynd's, at Ingestree.

Shrewsbury, the county town of Shropshire, 157 miles from London, delightfully situated on the river Severn: the streets are large, and houses well built, and contain five churches, besides meeting-houses. Here is one of the finest walks in England, both for beauty and extent.

Bridgenorth, 135 miles from London, a large romantic town of great trade, one part of which rises 60 yards from the banks of the river Severn.

Brosely, six miles from Bridgenorth, noted for a well exhaling a sulphurous vapour, which may be set on fire with a candle, and burns like spirits of wine.

White Ladies, in the parish of Tonge, on the east side of the county, noted for being the shelter of King Charles II. after his defeat at Worcester; and was hence conducted to the neighbouring grove of Boscobel, and there hid himself in an oak, which tree is now inclosed in a brick wall, travellers having before almost cut it away.

The

The chief seats in this country are, the Duke of Kingston's, at Toney-castle; the Earl of Shrewsbury's, at Pepper-mill; the Earl of Stafford's, at Sheffnall; Lord Kilmurray's, at Shenton-hall; Earl of Powis's, at Cockey-park; Lord Craven's, at Stoke, near Wenlock; and many others, which we have not room to mention.

Anglesea, an island, called by the ancients Mona, the seat of the druids, is encompassed on all sides by the Irish sea, except the S. E. where it is divided by Caernarvonshire. It is about 24 miles in length, 17 broad, and 60 in circumference; contains two market-towns, two chaces, 74 parishes, and 363 villages; very fruitful in corn (particularly wheat), cattle, fish, and fowl. The chief town and port is Beaumaris, 241 miles from London, a handsome well built town, formerly fortified with a strong castle, but now in ruins. The only seat of note in this island is that of Lord Viscount Bulkeley, situated on the declivity of a hill, near Beaumaris, whence is an elegant prospect.

THE END.

Just published, by G. CUMMINGS,

Price One Shilling,

A new and correct SCALE of DISTANCES
of the principal Cities and Towns in ENGLAND,

Neatly engraved, and printed on fine Writing Paper,
In a Size suitable to put into any Kind of Pocket-Books.

SCOTLAND

KITCHIN'S most ACCURATE MAP of the ROADS of ENGLAND and WALES:

with the Distances by the
Mile Stones,
and other most exact
Admenfurations
between Town & Town.

Remarks
Cities in New Print as London.
The Distances on the Roads in Measured Miles
between Town & Town as under.
Wicomb 6 1/2 Woburn 5 1/2 London
Barnes 8 1/2 Acton 10 1/2
The Figures added together show the Distance
from London to Wicomb 29 miles, or from
London to Woburn 26 miles.

We have wholly omitted the Computed
Distances on the Roads, they being
nothing better than the Effect of wild
and random Imagination; as 6 such
Miles are 7 or 8 in one Place, in another
9 or 10. true Measure, by which many
Travellers have been put to great In-
convenience.

As no pains has been wanting to
make this Map correct, if any Er-
rors have escaped undiscovers
we hope they will be excused; &
shall be obliged to any Gentlemen,
that will favour the Engraver
T. Kitchin at the Star, Holborn Hill,
with any Improvements, or point
out a Fault, which shall be im-
mediately corrected.

The Proprietor of this Map takes this Opportunity
of returning Thanks to the Noblemen & Gentlemen
who have favoured him with some valuable Improve-
ments carefully inserted in this Edition 1765.
